

The Advanced Projects Office (APO) at the Tricklebank Foundation is pleased to confirm the receipt of your notice of intent (NOI) in response to our Emergency Relief Constellation RFP. We are pleased that you are interested this initiative.

The response to our RFP has been overwhelming with a very large number of organizations submitting NOIs. The APO is concerned about our ability to properly evaluate such a large number of proposals. Therefore, the AFO is going to perform an initial down select to reduce the number of entities submitting complete proposals.

The APO is requesting a Systems Requirements Review (SRR) presentation from all interested parties. These preliminary proposals will be evaluated to determine which organizations will be invited to submit final proposals. Requirements for the preliminary proposals are as follows:

*Content:* Proposal content will be consistent with standard SRR expectations ("The SRR examines the functional requirements and performance requirements defined for the system and the preliminary program or project plan and ensures that the requirements and the selected concept will satisfy the mission"). For additional information consult NASA's systems engineering handbook.

*Format:* The SSR will be a 20 minutes powerpoint presentation with 5 minutes allocated to questions from APO personnel.

*Schedule:* The SRR will be scheduled for November 9th at APO selected facilities. The presentations need to be submitted to APO by 10pm Eastern time on November 7th.

We thank you for your interest in our Emergency Relief Constellation RFP and look forward to your SRR presentation.

Sincerely,

Advanced Projects Office  
Tricklebank Foundation
